

OIL & GAS

Oilfield Fracturing Hose

Trusted service.

Superior performance at a competitive price.

Quality is critical to the cost efficiency of a well servicing operation. That's why our Goodall Oilfield Fracturing Hose provides long, dependable service.

With a high grade nitrile tube, Oilfield Frac Hose is designed and built to resist the various ingredients that are commonly used, including frac sand, chemicals, gel and water. The multiple plies of high tensile strength textile reinforcement yield a 400 psi rated working pressure with a full 4:1 safety factor.

The high-quality, black SBR cover provides good abrasion resistance to the vibration wear found at the injection site. Available in 4-inch ID, Oilfield Frac Hose comes with crimped-on, one-piece hammer unions.

With the proper fitting and hose combination, the assembly is designed to provide superior service in this demanding application. Available from inventory at your nearest Lewis-Goetz oilfield stocking warehouse, Oilfield Frac Hose is a cost-effective solution to your fracking site hose needs.
